SPOTNZoom
PRO

MAIN FEATURES

SUSPICIOUS BEHAVIOR DETECTION

We can spot out people moving against the crowd, pedestrians moving in an irregular speed, or vehicles appearing repeatedly in a short time.

FACE RECOGNITION AND ANPR

The system supports third party face and license plate recognition solutions.

TRAFFIC VIOLENCE DETECTION

One can easily set the local traffic restrictions on the systems user friendly interface, and the software will detect and alert if any is violated.

SpotNzoom Pro is a new product amongst the SpotNzoom product range from Dolphio Technologies, and raises the technology's possibilities to a new level. Its essence is that by connecting the video surveillance network of a building or an area, it can provide complex event recognition and alerting functions for security professionals with full video management software functionality and state-of-art video analytic solutions.

AUTAMATED ALERTS

In case of a preset event, the system alerts the operator, in this way no more important events will be missed by the security staff.

MAP VIEW

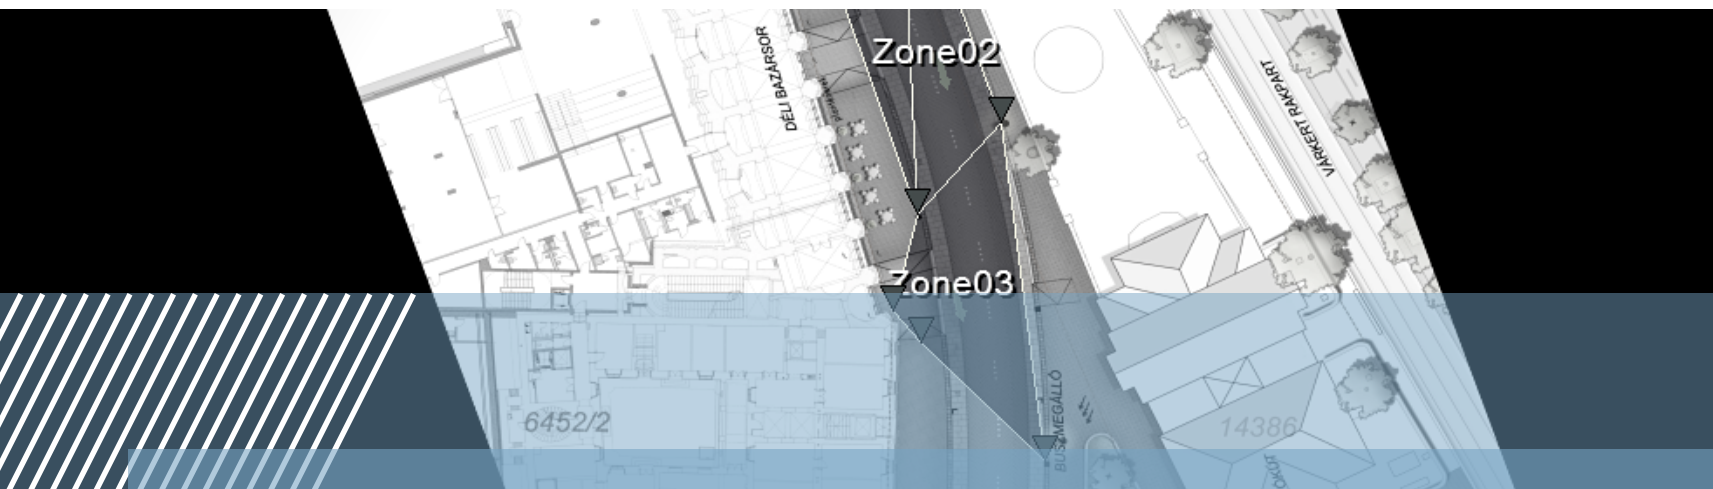

Interactive and real time map view mode, with the visualization of the entities in the area, and only one click away from their detailed data.

REPORTING

Exporting event lists with complex data information and media materials.

SYSTEM REQUIREMENT

- Central Processing Server
- 5th generation Intel i7
- 8GB RAM
- GPU 1GB
